#### **Table 4: Notes and comments in reference to Tables 1-3**

##### **Hay Analysis (Table 1):**

Analysis "as fed"; mature weight 1300 lb = 591 kg; feed at 2% BW; no pasture; NRC 2007 moderate workload

Diet is deficient in calories and protein, sodium, copper, zinc and selenium

Important ratios: Ca:P = 1.63; Ca:Mg = 3.55; Fe:Cu = 21.8

Ca:Mg high but acceptable for adult horses; Ca:P within limits

Fe:Cu:Zn:Mn = 1548:71:142:603 = 22:1:2:8.5; tolerable upper limit for Fe:Cu = 10:1; NRC recommendation Fe:Cu = 4:1

Simple sugars = ethanol soluble carbohydrates (ESC)

Iodine concentration not determined; selenium below detection levels (< 0.01 ppm)

##### **Total Diet with Kalm 'N EZ (Table 2):**

Kalm 'N EZ analysis composite sample from 3 bags; analysis reported "as fed" or "as sampled"; marketed as low sugar (ESC = ethanol soluble carbohydrates), low starch feed; moderately high fat content; Equi-analytical Package 603

Calories and protein deficits balanced

Add 15 g Mg as MgO (25 grams) to reduce Ca:Mg ratio to 2:1

Add 10 grams Na as NaCl (25 grams)

Fe:Cu:Zn:Mn = 3139:329:896:1080 = 9.5:1:2.7:3.2; add 100 mg Zn as zinc polysaccharide (450 mg) to increase Cu:Zn = 1:3

Cu and Zn at least 150% x NRC; Fe:Cu < 10:1

Lysine, iodine and selenium concentrations for Kalm 'N EZ are minimum values from guaranteed analysis

##### **Total Diet with Kalm 'N EZ and Essential K (Table 3):**

Nutrients listed are minimum values from guaranteed analysis

NSC = Nonstructural carbohydrates, which consist primarily of WSC (water soluble carbohydrates) + starch; for more information on measurements of NSC, ESC and WSC link to Fall 2015 newsletter from Equi-analytical:

Additional supplementation with Essential K unnecessary for balanced diet at moderate workload
